

PATIO BLINDS

for privacy whilst protecting your outdoor area from the sun, wind and rain.

Channel Guide Awning

A robust blind that is the perfect solution for privacy whilst protecting your outdoor area from the sun, wind and rain. The channels and brackets are powder coated to any standard colour to suit your decor and give a sleek minimal effect. The bottom rail locks off in the side tracks eliminating straps and clips. Heavy duty springs ensures fabric tension. Suits mesh or acrylic canvas.

Gear Operated BCS Track Awning

Gear Operated Track guide blinds can be used for larger spans giving stability with easy operation using a crank handle or motorisation or wire guides. Suits mesh, acrylic or PVC. Anti blow-out tracks can be added as an optional extra to prevent fabric blowing out of channels.

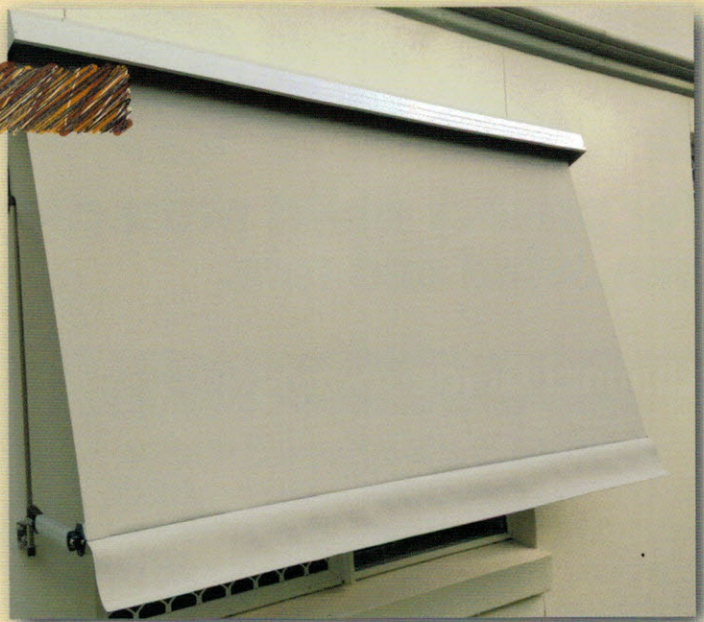

Ziptrak® Awnings

Ziptrak® Awnings are the latest release to replace the traditional PVC zipped blinds. The fabric on Ziptrak blinds is restrained in aluminium side channels stopping at any point. Therefore creating a total weather seal. The bottom rail clicks into a secure locked down position making a strong barrier to wind and rain. Suits PVC or mesh.

Automatic Roll-up Awning

A robust awning to protect windows from heat and glare. It can be pulled up and down to stop at any given point, and retract back up into a weather box. This awning is available with colour co-ordinated weather box, bottom rail and arms. Cloth and roller are fixed within the weather box.

Folding Arm Awning

Folding Arm Awnings extend your outdoor living area. An optional weather box is also available. It is recommended that Variable Pitch Arms are purchased over fixed arms as they allow greater adjustment in both vertical and horizontal pitch. The awning can then be extended or retracted by either a manual crank drive, or motorized - either way the awning can be fully extended or only partially extended.

Aluminium Framed Awning

Hoods are available in various shapes. Great for walk-ways over doors and commercial use when sign written. Frames are made from 50 x 14 aluminium and custom bent. This awning is screwed to your wall and sealed to eliminate water running down the back.

To enhance the life of your awnings they must be regularly maintained.
